

ONNEILE TLOUANA. 20230076. NET731. WEEK 8. COST MANAGEMENT

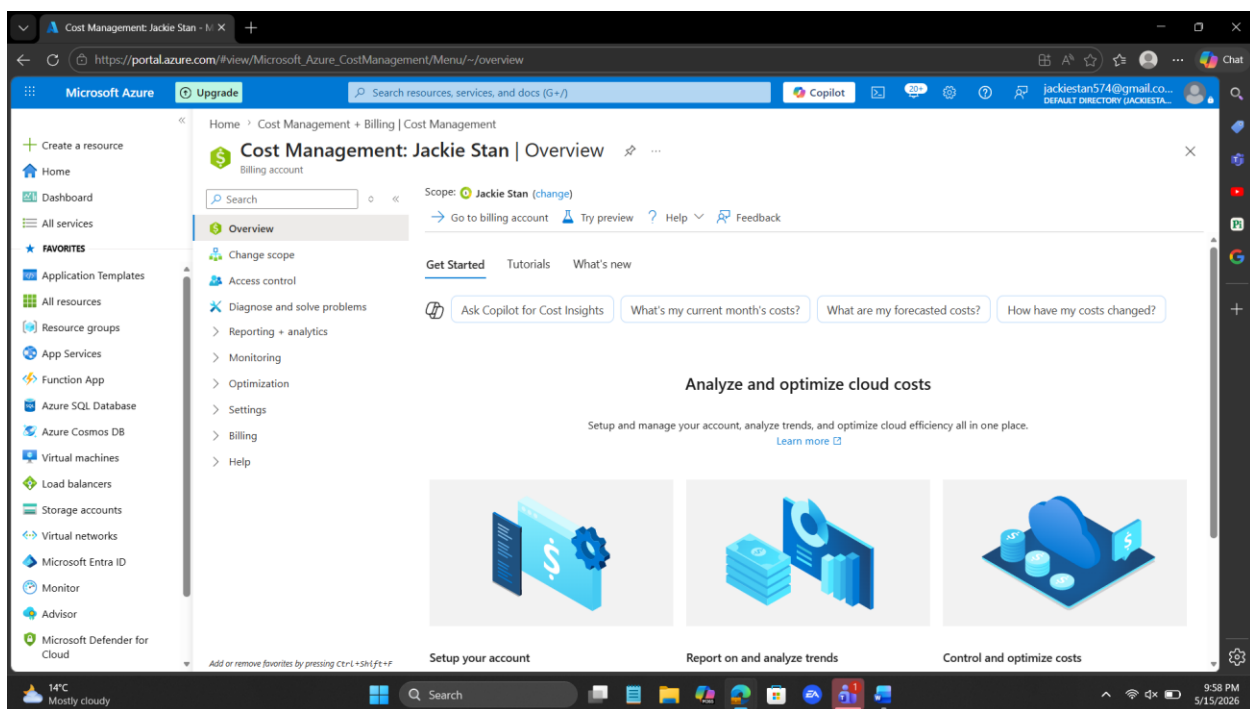

This practical focused on implementing Azure Cost Management tools to monitor spending, configure budgets and optimize cloud resource usage.

Budget alerts and cost optimization strategies were implemented to ensure the Azure environment remained within the allocated spending limit.

Below are screenshots of:

- Created Azure budget alerts to track spending
- Monitor usage and adjust resource settings to stay within \$100

Below are screenshots of creating budget alerts (cost management and billing)

Below are screenshots of budgets configuration

Below are screenshots of cost analysis and optimization, HOWEVER screenshots below show no forecasted monthly cost was available due to minimal resource usage and no billing history. The environment is primarily used for short lived lab deployments and resources are deleted after use, resulting in insufficient data for Azure cost forecasting, as this is a personal account with less than a month of activity.

The top screenshot shows the Azure Cost Management 'Cost analysis' page for 'Jackie Stan'. The left sidebar lists various services like Azure OpenAI, Reservations, Resource groups, Services, and Subscriptions. The main content area displays 'Daily costs' with a table of recent costs. The table has columns for Name, Group by, Date range, and Filters. The data shows costs for Azure OpenAI, Reservations, Resource groups, Services, and Subscriptions, all with a date range of 'This month'.

Name	Group by	Date range	Filters
Azure OpenAI	Resources	This month	ServiceName: Cognitive Services...
Reservations	Reservations	This month	--
Resource groups	Resource groups	This month	--
Services	Services	This month	--
Subscriptions	Subscriptions	This month	--

The bottom screenshot shows the same page, but with a message stating 'You haven't opened any views lately'. The message includes a 'Browse all views' button and a 'Learn more' link.

REFLECTION

This practical improved my understanding of cloud financial governance and Azure cost optimization strategies.

1. What surprised you?

Zero dollar cost forecast.

2. Production difference?

Production environments require always-on resources which increases costs significantly.

3. Improvements?

Would explore Azure Cost Anomaly Detection and reserved instances

SKILLS DEMONSTRATED

- Azure Cost Management
- Budget Configuration
- Cost Optimization
- Financial Governance
- Resource Optimization
